The purpose of the following facts, with tables showing basic statistical information, is to provide ASCS personnel and others with reference material relating to the cotton acreage allotment, marketing quota, and price support programs.

#### THE MARKETING QUOTA PROCLAMATIONS

The Secretary of Agriculture on October 12, 1961, proclaimed a national marketing quota and a national acreage allotment for the 1962 crop of upland cotton and a similar proclamation for the 1962 crop of extra long staple cotton. The national acreage allotment for upland cotton was set at 18,101,718 acres (including 100,000 acres from the national reserve to take care of minimum farm allotments) and at 100,293 acres for extra long staple cotton.

#### BASIS FOR THE PROCLAMATIONS

The Agricultural Adjustment Act of 1938, as amended, requires that the Secretary issue such proclamations, not later than October 15, 1961, if he finds that the total supply of upland cotton for the marketing year beginning August 1, 1961, will exceed the normal supply for such year. In the case of extra long staple cotton, the proclamation is required when the total supply exceeds the normal supply by more than 8 percent.

The act defines total supply and normal supply and their component parts and provides a formula, including in the case of upland cotton, authority for the Secretary to make such adjustments in the amount of the quota as he determines necessary to assure the maintenance of adequate but not excessive stock of cotton in the United States, for determining the amount of the national marketing quota and national acreage allotment. Similarly, the act provides a formula for adjustments in the amount of the quota for extra long staple cotton to assure adequate working stocks in trade channels until cotton from the next crop becomes readily available without resort to Commodity Credit Corporation stocks. No adjustments were required for 1962 in the case of extra long staple cotton. The Secretary's findings and determinations with respect to total supply, normal supply, and the amounts of the national quota and allotment are shown in Table 2 of this pamphlet for both kinds of cotton.

The Secretary's findings and determinations were based on the latest available statistics of the Federal Government. The national marketing quotas and acreage allotments for upland and extra long staple cotton were included in the proclamations.

#### THE REFERENDUMS

Along with the proclamations the Secretary announced that separate national referendums on the two types of cotton will be held on December 12, 1961, for the purpose of providing eligible cotton producers an opportunity to vote, by secret ballot, for or against the quotas proclaimed. At least two-thirds of those voting in the referendum must favor quotas if they are to continue in effect.

#### VOTING ELIGIBILITY REQUIREMENTS

Farmers eligible to vote in the referendum with respect to upland cotton shall be those farmers who were engaged in the production of upland cotton in 1961 and farmers eligible to vote in the referendum with respect to extra long staple cotton shall be those farmers who were engaged in the production of extra long staple cotton in 1961. A landlord of a standing-rent, cash-rent, or fixed-rent tenant is not eligible to vote.

The term "engaged in the production" shall include planting a crop even though the crop is not harvested if such failure to harvest is not caused by the neglect of the farmer. In addition:

- 1. Each person who shared in the crop, or proceeds of the crop, actually produced on the farm in 1961, as owner-operator, cash tenant, landlord of a share tenant, share tenant, or sharecropper, and
- 2. Each person who was either the owner or was the operator of a farm for which an acreage allotment of the cotton was established (including farms from which allotments were entirely released) for 1961, but on which no cotton was produced, shall be deemed to be a farmer engaged in the production of cotton in such year to the extent of the acreage of cotton in which he would have shared if the cotton had been produced.

#### APPORTIONMENT OF NATIONAL ACREAGE

The act also provides formulas for apportionment of the national acreage allotment to the respective States, the State allotments to counties, and the county allotments to farms. State allotments for 1961 and 1962 are shown in Table 1.

#### CURRENT SUPPLY SITUATION

The acreage planted to all cotton, by States, and the supply and distribution of all cotton for representative periods of years are shown in Tables 3 and 4. The carryover of upland cotton was 6.8 million bales on August 1, 1961, as shown in Table 2. If exports for the 1961-62 marketing year reach 5.7 million bales and consumption is 8.6 million bales, as currently estimated, the carryover of upland cotton on August 1, 1962, would be about 6.8 million bales.

#### PRICE SUPPORT

If marketing quotas for upland cotton are approved in the December 12 referendum, price support will be available to growers who comply with their farm allotments at a level within the range of 65 to 90 percent of parity. The exact level of price support will be determined later. If marketing quotas are disapproved, price support will be available to growers who comply with their upland cotton farm allotments at 50 percent of parity.

If growers approve quotas in the referendum for extra long staple cotton, price support on designated kinds of ELS cotton of the 1962 crop will be available to growers who comply with their farm allotments at the full level of effective supports. If quotas are disapproved, price support will be available to growers who comply with the ELS cotton farm allotments at 50 percent of parity.

### COTTON EXPORT PROGRAM

This program was initiated in 1956 in order to reduce the accumulated surplus of United States cotton, which was at a record high at the beginning of that marketing year, and to reestablish and maintain the fair historical share of the world market for U. S. cotton. The export sales program, whereby CCC stocks of upland cotton were offered for sale at reduced prices, for export, was discontinued July 31, 1959. Since that time, payment-in-kind export programs for cotton have been carried out by the Department. Under the 1961-62 Cotton Export Program - Payment-in-Kind, exporters who register their sales or consignments of

upland cotton with CCC can earn payments in the form of certificates redeemable by CCC at face value (1) in payment for upland cotton purchased for unrestricted use under CCC sales announcements providing for acceptance of such certificates, (2) in repayment of 1961-crop upland cotton loans which are outstanding under the CCC cotton loan program, or (3) if the certificate has not been used to obtain cotton under (1) or (2) above for cash not earlier than 60 days after the issue date of a certificate. The current rate of payment is  $8\frac{1}{2}$  cents per pound or about \$42.50 per bale. Cumulative registrations since the beginning of the program on April 29, 1961, through October 20, 1961, totaled 2,252,616 bales.

#### COTTON PRODUCTS EXPORT PROGRAM

This program was initiated in 1956 in order to equalize the price of upland cotton being exported in the form of cotton products with the price of raw cotton being exported under the export program. It is carried out by making equalization payments to the exporters of cotton products. The payments reflect the difference between the export price of cotton and the domestic market price of cotton on the raw cotton content of the cotton products exported. Payments to exporters during the 1957-58, 1958-59, 1959-60, and 1960-61 marketing years totaled \$15.5 million, \$13.2 million, \$17.2 million, and \$14.4 million, respectively. During the current marketing year, payments to exporters of cotton products totaled about \$2.4 million through September 30, 1961. Since the beginning of the program in 1956, payments have been made on exports to 120 foreign countries. Base equalization payment rates under the program have ranged from 5.61 to 8.50 cents per pound.

## YIELD TRENDS

The trends in cotton yields per acre for the United States and by regions can be determined by referring to Table 5.

## NATIONAL ALLOTMENTS 1956-62

For the purpose of comparison the respective allotments for the years 1956 to 1962, inclusive, are as follows:

1956	17,391,304 acres
1957	17,585,463 acres
1958	17,554,528 acres
1959	17,329,515 acres *
1960	17.533,402 acres *

1961 1962 18,458,424 acres 18,101,718 acres

\* Includes increases that resulted from election of Choice (B) allotments.

Table 6 shows the number of farms and the total acreage involved in the release and reapportionment provisions of the cotton program.

Table 1 of Annual Report of the Bureau of the Census "Cotton Production and Distribution" except for 1959 and 1960 which are from subsequent Census Reports.

Prepared in Production Programs Branch, Cotton Division, ASCS, November 1961.

Does not include picker lap imports reported by the Bureau of the Census as raw cotton. 7/ Crop Reporting Board, September 8, 1961.
